VIA JAMS ACCESS

Special Master Daniel B. Garrie
DGarrie@jamsadr.com

Re: *In re Facebook Consumer Privacy User Profile Litigation*, JAMS Ref No.
1200058674

Dear Special Master Garrie,

Pursuant to Order Following March 9, 2022 Hearing Regarding Plaintiffs' Motion To Compel Production of Plaintiff Data dated March 22, 2022, we submit this response on behalf of Facebook. We also thank the Special Master for granting an extension of our time to respond due to a medical condition on our team, as well as Plaintiffs for agreeing to our request for an extension.

Hive

1. How does ad impression and ad click data for Facebook users get into Hive?

Answer: Ad impression and ad click data are received by Facebook servers through a HTTP web request from a user's web browser or the Facebook app installed on the user's device.

2. What tables store ad impression and ad click data for Facebook users?

Answer: The following Hive tables store ad impression and ad click data:

- ad_imps_annotated
- ad_clks_annotated

HIGHLY CONFIDENTIAL—ATTORNEYS' EYES ONLY

3. What data pipelines are used to analyze ad impressions and ad click data for Facebook users? Where is the final output of these data pipelines stored (e.g. Hive table names, TAO, etc.)?

Answer: Based on a reasonable investigation, we attach as **Exhibit A** a list of data pipelines used to analyze ad impression and ad click data for which we believe output is stored in Hive.

4. Identify a list of Hive tables containing columns that store a UID, RID, SID, ASID, or other means of identifying a Facebook user. The list is to include tables that were active during the relevant time period.

Answer: Based on a reasonable investigation, we attach as **Exhibit B** a list of Hive tables that store user identifiers with data as it enters Hive. These tables were identified using tools that probabilistically identified them as containing user identifiers. The list does not include: (1) temporary, test, and error tables; (2) tables used to evaluate system performance; (3) tables that contain no data; (4) tables related to other Meta products (e.g., Oculus, Instagram, and WhatsApp); (5) tables used for infrastructure, operations, and product testing; and (6) tables believed to contain data that is either duplicative or transformed.

5. What is the estimated time and cost to produce data for the Named Plaintiffs from Hive?

Answer: Meta estimates that it would take approximately 62 billion CPU seconds or around 720,000 CPU days of computational cost to search across the entire Hive Data Warehouse and extract all the data about a single user.

Ads Interests

1. How does Facebook determine ads interests for a user based on what the user views (i.e. are ad interests based on what the user views on Facebook or other Internet activity)?

Answer: Ads interests are derived from two types of on-platform activity: (1) page interactions and (2) ad interactions. Page interactions include the following types of engagement: like, share, follow, comment, RSVP, comment, claim, answer, other action, link click, photo view click, video play click, video CTA click, other click. Ad interactions are ad clicks.

HIGHLY CONFIDENTIAL—ATTORNEYS' EYES ONLY

2. Does Facebook track user activity across the Internet using cookies? If so, what cookies does Facebook use? Provide a statement explaining the use of cookies in tracking user activity on and off the Facebook platform to create behavioral data about users. Provide documentation on the use of fbp, fbc, and DATR cookies. Explain whether the scope of tracking user activity includes on or off platform activity, or both.

Answer: Facebook does not track user activity across the internet. Facebook receives data about a user's off-platform activity from advertisers who choose to integrate Facebook Business Tools, such as Facebook Pixel, which in turn rely on web technologies like cookies.

Facebook uses browser and user cookies (on and off-platform).

Browser cookies used to identify the browser:

- DATR: The DATR cookie identifies a web browser and is generally used for safety and security purposes.
- _fbp: The _fbp cookie is set on the third party domain only if the advertiser/publisher has installed the Facebook Pixel business tool and opted into the use of these cookies. The cookie has a browser identifier, and the epoch time when the cookie was created. For documentation on the _fbp and _fbc cookies, please see <https://developers.facebook.com/docs/marketing-api/conversions-api/parameters/fbp-and-fbc/>
- fr: The fr cookie is used for advertising purposes

User cookies used to identify a Facebook user:

- _fbc: The _fbc cookie is a cookie set on the third party domain only if the advertiser/publisher has installed the Facebook Pixel business tool. It is only set if the click originated from the Facebook services (e.g., when clicking on an ad on Facebook news feed). The _fbc cookie contains an encrypted user id.
- xs/c_user: The xs/c_user cookies are used to identify if a user is logged into the Facebook platform.

HIGHLY CONFIDENTIAL—ATTORNEYS' EYES ONLY

3. How are ads interests associated with a particular user? Where is ads interests data for individual users stored? Facebook is to describe whether ad interests data can be associated with a specific user via UID, RID, SID, ASID, or other means and whether it is included in the DYI file.

Answer: Ads interests are associated with a particular user via UID. Ads interests data for individual users are stored in a Hive table called `adm_user_interest_v4_prod`. They are also available in DYI and Ads Settings.

4. What is the estimated time and cost to produce ad interests data for the Named Plaintiffs?

Answer: Ads interests for the Named Plaintiffs are in the DYI file.

Contracts

1. Is the data referenced in the contracts with Netflix, Microsoft, and/or YouTube that Facebook provided to Special Master Garrie for *in camera* review in connection with the Named Plaintiff Data hearings included in the DYI file? If not, Facebook is to specify what data is not included and where such data stored.

Answer: Based on a reasonable investigation to date, the list attached as **Exhibit C** identifies user data in the contracts submitted to Special Master Garrie for *in camera* review and (1) whether it is included in the DYI file, and (2) if it is not included in the DYI file, the most likely location of that data. Upon further review of the contracts submitted, we note that many do not actually relate to user data, and many are a decade or more old and relate to products that were deprecated long ago.
